

StepOne™

A new way to decon

The Problem...

50% of carcinogens are absorbed **before** you perform decon

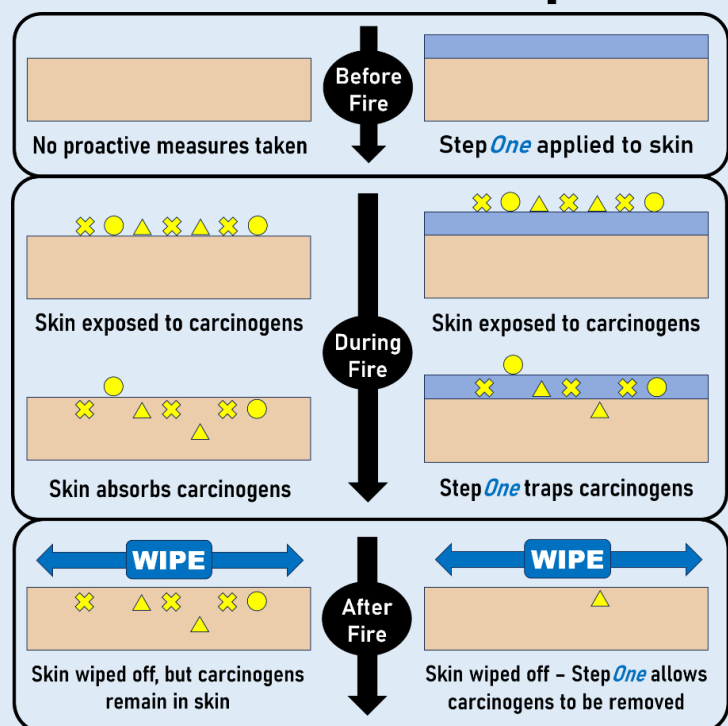

The Solution...

Delay
the absorption with a
proactive barrier

Traditional Decon

StepOne

StepOne is the first and only *proactive* decon product.

At the beginning of your shift, spray **StepOne** on your forearms, calves, and neck like sunscreen.

Proceed with your shift. **StepOne** lasts for 24 hours and is water-, sweat-, and rub-resistant.

During firefighting, **StepOne** works to delay carcinogen absorption into the skin.

After a fire, decon like usual using wipes or a shower—but now **10x** more effectively.

Carcinogen Absorption into the Skin
